

## PROGRESS REPORT

**TASK:** Together with MJ Syllanto, we are tasked in the frontend of this Attendance Management system. The first step in making the front end is making the wireframe of the UI for this system.

**WHAT DID I DO:** What we did is make the important pages of the system which is the Login page, Dashboard/Homepage, and a sample of what each a page of each subject's attendance checking will look like. While mainly worked on the Login page and finishing touches of the Dashboard, I worked on the Dashboard page and the sample page of subject attendance.

**PROBLEMS:** The only issues we encountered while designing was that we ran out of ideas for how it should look like. We ran out on ideas on how to make it be suitable for a student to use. Aside from that, the dilemma of the backend.

**SOLUTION:** Search the internet for possible inspirations and went with the simple design following the backend.

This is an initial look at what the UI may look like:

**Note:** This is not the final design. It is still an initial look. Especially the color palette. For the wireframe of each subject, most likely only one or two subjects will be made as reference. The rest will be focused on in the code.
